

Wellness Marketplace for Alternative Therapies

Project Statement

This is a full-stack wellness marketplace that connects users with verified alternative therapy providers across domains like physiotherapy, acupuncture, Ayurveda, and chiropractic care. It enables users to book therapy sessions, purchase wellness products, interact with practitioners, and receive AI-powered recommendations. The platform integrates secure payments, scheduling, and health data APIs to deliver a holistic wellness experience.

Outcomes

- Verified practitioner profiles with ratings and specializations
- Marketplace for booking therapy sessions
- Product store for wellness tools and remedies
- Community Q&A and review system
- AI recommendation engine for therapy suggestions
- Secure payment and scheduling integration
- Integration with OpenFDA, WHO, and fitness APIs
- Email and in-app notification

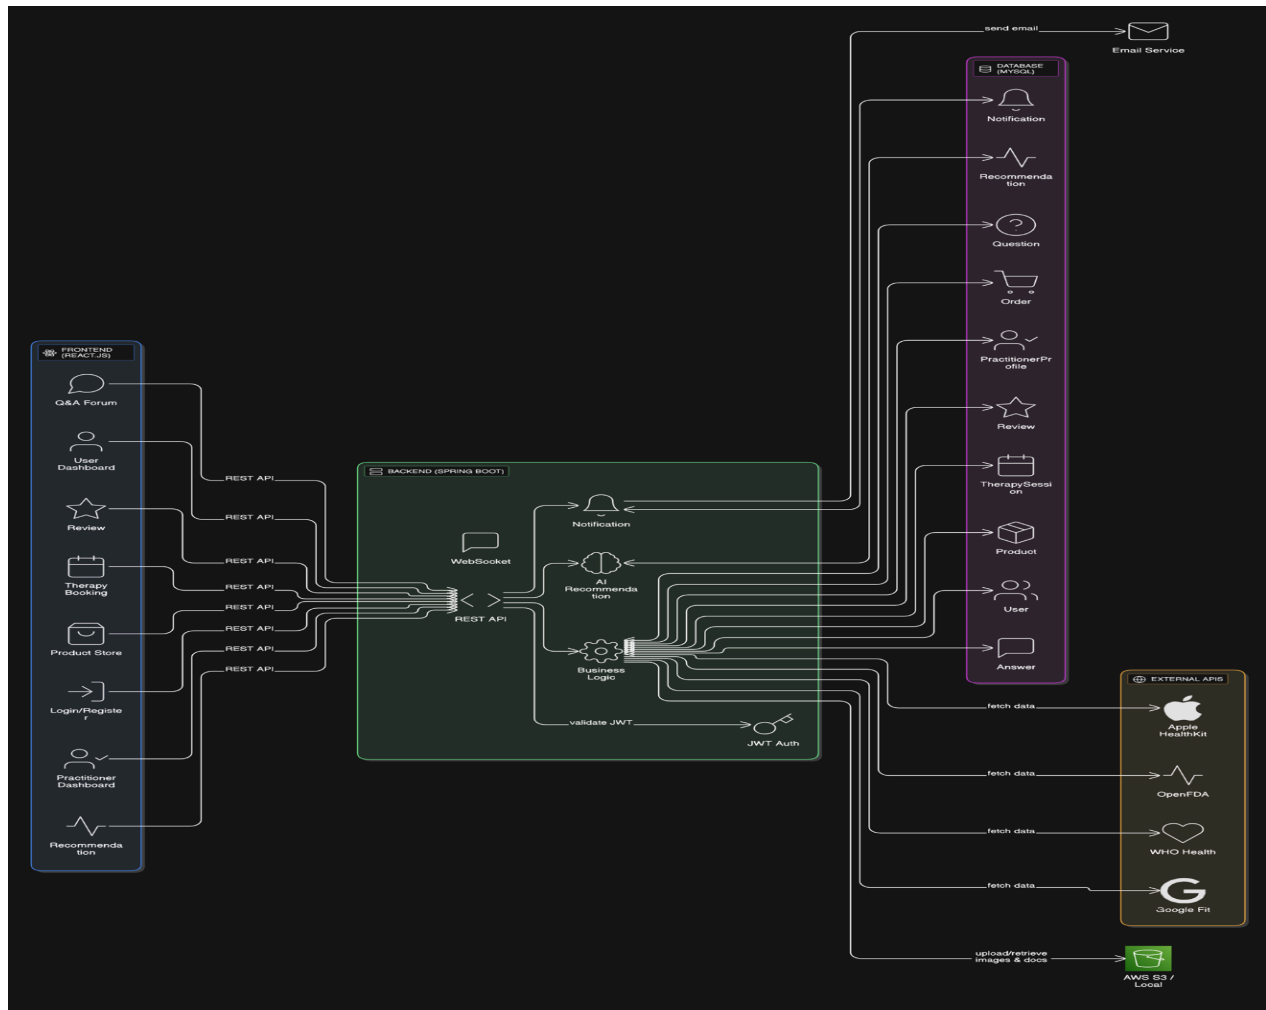

Modules

- **Module A:** Practitioner onboarding and verification
- **Module B:** Therapy session booking and scheduling
- **Module C:** Product marketplace and cart management
- **Module D:** Community reviews and Q&A forum
- **Module E:** AI recommendation engine and health data integration
- **Module F:** Notifications and secure payment

Tech stack

- **Frontend:** React.js + Tailwind CSS **Backend:** Spring Boot (Java)
- **Database:** MySQL
- **Authentication:** JWT (access + refresh tokens)
- **Maps & Location:** Google Maps API + Geolocation API
- **Real-time Messaging:** WebSockets (Spring WebSocket + STOMP)

Architecture diagram

Milestones

Milestone 1: Week 1-2 – Practitioner & User Profiles

- Registration and login with JWT authentication
- Practitioner verification and specialization tagging

- User dashboard with session history and product orders

Outcome:

- Login/Register form
- Profile setup page
- Practitioner verification module

Milestone 2: Week 3–4 – Therapy Booking & Scheduling

- Browse and book therapy sessions
- Calendar integration and session reminders

Outcome:

- Booking form
- Calendar widget
- Session detail page

Milestone 3: Week 5–6 – Product Store & Community Forum

- Browse and purchase wellness products
- Community Q&A and review system

Outcome:

- Product listing and cart
- Review form
- Q&A forum module

Milestone 4: Week 7–8 – AI Engine & Integrations

- AI recommendations based on symptoms
- Integration with OpenFDA, WHO, and fitness APIs
- Notifications and analytics dashboard

Outcome:

- Recommendation widget
- API integration module
- Notification center

Database schema

1. User

- a. **_id**: Unique identifier of user
- b. **_name**: Name of the user
- c. **_email**: Email address of user
- d. **_password**: Encrypted password of user
- e. **_role**: Role of user (patient/practitioner)
- f. **_bio**: Short biography of user

2. PractitionerProfile

- a. **_id**: Unique identifier of practitioner profile
- b. **_userId**: Corresponding ID of practitioner
- c. **_specialization**: Therapy specialization of practitioner
- d. **_verified**: Verification status of practitioner
- e. **_rating**: Average rating score

3. TherapySession

- a. **_id**: Unique identifier of therapy session
- b. **_practitionerId**: Corresponding ID of practitioner
- c. **_userId**: Corresponding ID of patient
- d. **_date**: Scheduled session date and time
- e. **_status**: Status of session (booked/completed)
- f. **_notes**: Session notes or feedback

4. Product

- a. **_id**: Unique identifier of product
- b. **_name**: Name of the product
- c. **_description**: Description of product
- d. **_price**: Price of the product
- e. **_category**: Category of product
- f. **_stock**: Available quantity in stock

5. Order

- a. **_id**: Unique identifier of order
- b. **_userId**: Corresponding ID of user
- c. **_productId**: Corresponding ID of product
- d. **_quantity**: Quantity ordered
- e. **_totalAmount**: Total price of order
- f. **_orderDate**: Date of order placement
- g. **_status**: Current status of order

6. Review

- a. **_id**: Unique identifier of review
- b. **_userId**: Corresponding ID of reviewer
- c. **_practitionerId**: Corresponding ID of practitioner
- d. **_rating**: Rating score given
- e. **_comment**: Review comment text

- f. **_createdAt**: Timestamp of review creation
- 7. **Question**
 - a. **_id**: Unique identifier of question
 - b. **_userId**: Corresponding ID of user
 - c. **_content**: Question content text
 - d. **_createdAt**: Timestamp of question creation
- 8. **Answer**
 - a. **_id**: Unique identifier of answer
 - b. **_questionId**: Corresponding ID of question
 - c. **_practitionerId**: Corresponding ID of practitioner
 - d. **_content**: Answer content text
 - e. **_createdAt**: Timestamp of answer creation
- 9. **Recommendation**
 - a. **_id**: Unique identifier of recommendation
 - b. **_userId**: Corresponding ID of user
 - c. **_symptom**: Reported symptom by user
 - d. **_suggestedTherapy**: Recommended therapy type
 - e. **_sourceAPI**: Source of recommendation data
 - f. **_timestamp**: Time recommendation was generated
- 10. **Notification**
 - a. **_id**: Unique identifier of notification
 - b. **_userId**: Corresponding ID of user
 - c. **_type**: Notification type
 - d. **_message**: Notification message content
 - e. **_status**: Read/unread status of notification
 - f. **_createdAt**: Timestamp of notification creation
